

Innovation, convenience and security in one access solution

ekey has been synonymous with innovative fingerprint scanner access control systems for more than 20 years. This makes keys, cards and codes a thing of the past. Indeed, the finger not only opens the door, but also controls the smart home: alarm system, light and room temperature as well as blinds, pool cover or lawn robot. The access solutions offer outstanding design, con-

venience and security. From the idea through the patented algorithm to the finished product: The family-run company relies on a comprehensive value chain – from research and development to production at its headquarters in Linz (Austria). Finally, with an export share of more than 80%, ekey brings secure, convenient and smart access to buildings around the world.

ekey dLine fingerprint scanner

Door handle Black

ekey dLine fingerprint scanner

For integration into door leaves and door handles

The ekey dLine fingerprint scanner is the ideal solution for integration directly into the door leaf or door handle. Thanks to the smallest possible design, the fingerprint scanner fits perfectly into any door design.

Customized fingerprint scanners

The design element for the ekey dLine in the door leaf or handle and the frame for the ekey xLine next to the door can be manufactured in different colors and materials. For a consistent design concept, the ekey xLine fingerprint scanner can also be integrated into many standard switch ranges.

ekey sLine fingerprint scanner

TOP 1

ekey sLine fingerprint scanner

For integration into door stations and cavities

The ekey sLine fingerprint scanner blends harmoniously into the design of well-known door station manufacturers and letterboxes, which also ensures barrier-free operation.

Smart home

Modern building control becomes even more intelligent with ekey. The advantage of the fingerprint scanner solution is that different functions and scenarios in the smart home can be triggered with different fingers. This allows buildings to be controlled on a person-specific basis. There are no limits to your imagination.

Lighting

After sunset, switch on the lighting in the house at the same time as you open the door – with individual lighting scenes, depending on who operates the fingerprint scanner.

Blinds

The stored finger not only opens the door, but also the blinds at the same time – so several functions can be triggered with just one action.

Alarm

The alarm system can be automatically deactivated via fingerprint scanner when you come home or a silent alarm can be triggered in dangerous situations.

Pool cover

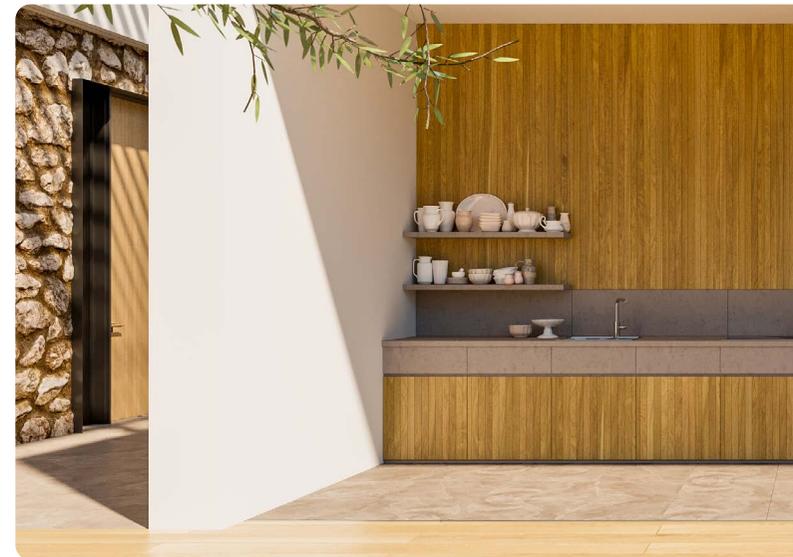

Maximum security even at the pool in the garden – the fingerprint scanner functions as a simple and perfect child safety system for uninterrupted swimming fun.

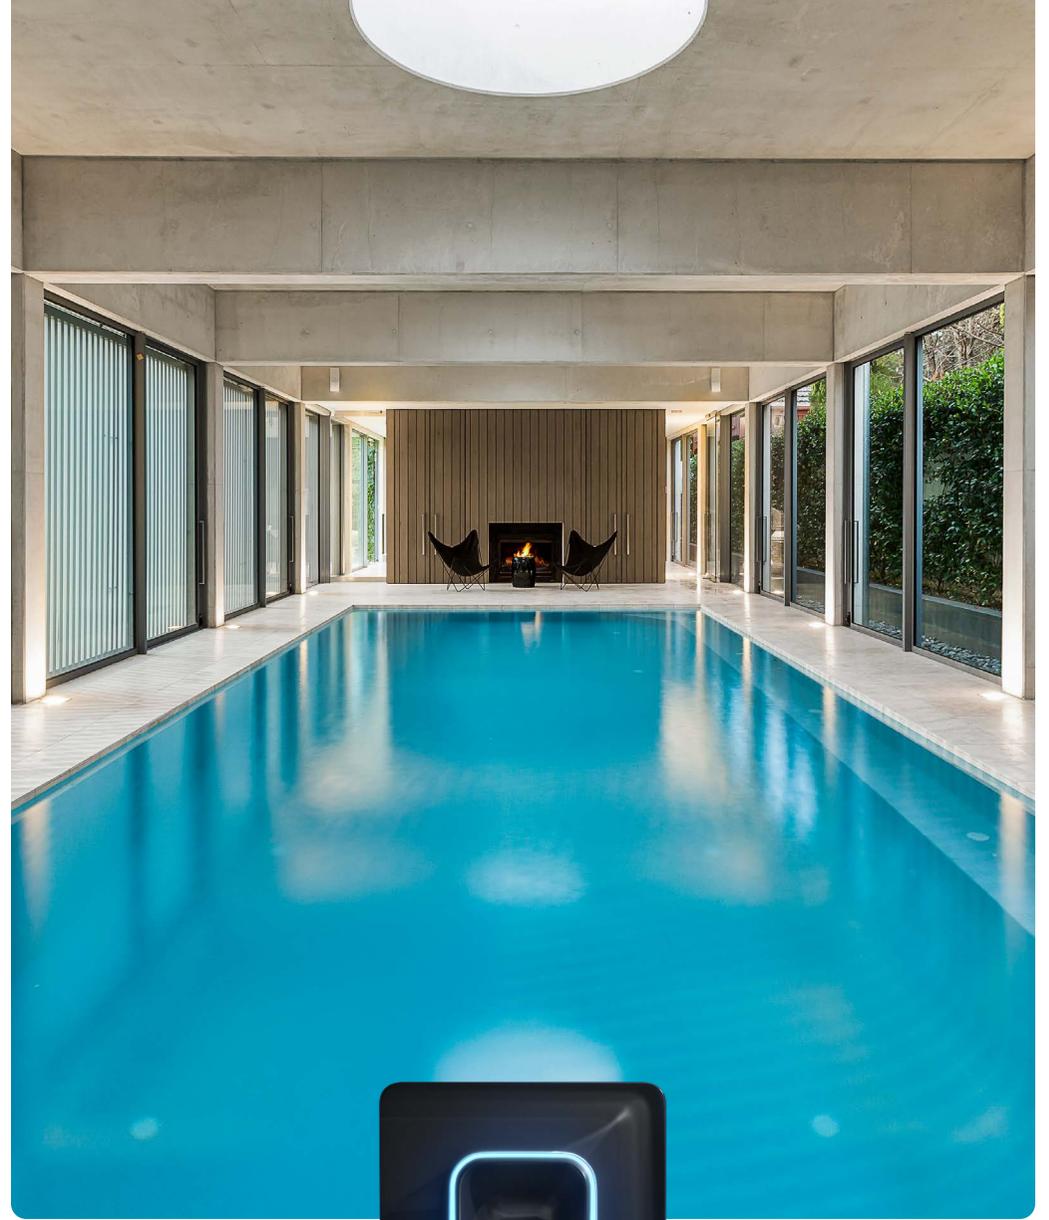

Security can be so simple

With an ekey fingerprint scanner, all personal valuables are kept safe:

- walk-in closet
- home cinema
- wine cellar
- panic room
- home office
- pool house
- garage
- and many more

User-friendly and future-proof system architecture

App administration

All devices, access areas, users and functions are administered centrally via the ekey bionyx app.

Smart features

Additional functions such as remote opening, push notifications when the door is opened, time slots or connection to Amazon Alexa round off the access control system and make everyday life easier.

Smart home connectivity

The ekey fingerprint scanner system communicates with various smart home systems and thus creates additional added value in the home.

Several fingerprint scanners, one system

Up to 20 fingerprint scanners and 100 users, whether ekey xLine, sLine or dLine, can be conveniently administered in the ekey bionyx system via one account – even across multiple locations.
